

The purpose of Operational Hydro-Meteorological Warning System

The purpose of Operational Hydro-Meteorological Warning System is to formulate and issue on time information on the perspectives of development and activities of unfavorable and hazardous hydro-meteorological phenomena and events.

Unfavorable and hazardous hydro-meteorological events could endanger the safety of people, cause damage to the property, endanger the traffic and other forms of communication, cause disorders in the population related to food supply, thermal and electrical energy, etc. and cause disruption in normal daily activities.

How to behave in the case when the official information is issued about unfavorable and hazardous hydro-meteorological phenomena and events (weather conditions)? How to prepare for extreme weather? Our advice can be found on the document "Meteoalarm advice".

In no event will Republic Hydrometeorological Service or our employees/staff, or our Meteoalarm partners be liable to you or to any third party for any direct, indirect, incidental, consequential, special, exemplary or any other damages or loss profit resulting from any use, wrong use or misuse of this advice or any use, incorrect use or misuse of information or of data that you can find on our internet address www.meteoalarm.rs .
